WEB DEVELOPMENT

Game Cellar— *Video Game Ecommerce App* **(Personal Project)**

Technologies Used: Angular, JQuery, Bootstrap, Nodejs, Express, MongoDB

- MEAN stack application where users can create personal profiles and sell games at a price they find fair
- Built entire project from scratch, utilized Angular, JQuery, and Bootstrap for a designed and responsive frontend along with a Nodejs backend and MongoDB

Github link: Github.com/skweepz22/game_cellar

Finding Fido— *Pet Matchmaker* **(Team Project)**

Technologies Used: Ruby on Rails, JS, JQuery, CSS, Bootstrap, PostgreSQL

- Fun web application that pairs an individual with the perfect canine companion after a simple personality survey.
- Created detailed database with information regarding individual dog breeds and compared user survey entries to create a perfect match
- Assisted with RESTful API creation, rendering our database as json data

Github Link: Github.com/skweepz22/pick_my_dog

GardKnight Web Application— *Company Website* **(In-Development)**

Technologies Used: Apache, PHP, Angular, MySQL

- Currently building professional web app for GradKnight Surveillance Systems for advertising purposes as well as customer service & product accessibility
- In charge of creating a well designed and responsive front end using Angular, Bootstrap, JQuery, and Google Fonts
